FPi 4030
Folder-Inserter System

The new generation of folder-inserter systems

FPi 4030s

FPi 4030 Folder-Inserter System

Folds easily into your work flow

The innovative design of the FPi 4030 folder-inserter system puts an end to the stress of the daily mail. Best suited for mailrooms with a monthly volume of up to 40,000 letters, it will handle business letters, advertising mailings, invoices and other documents–with or without enclosures.

With ease of operation and reliability, the system will feed, fold and insert letters into envelopes. The letters will then automatically be sealed and ejected in an organized stack. Automatic monitoring ensures the correct number of sheets per envelope (address sheet, continuation sheets and enclosures).

The FPi 4030 system includes a variety of features and special functions such as 20 programmable jobs and Fill & Start, enabling anyone to operate the system without special training. Real Sheet Control allows for safe, reliable elimination of double-feed messages by actually measuring the papers' thickness. With Feeder Swap, when one document station empties, another station starts automatically, processing high-volume mailings without pause. Feed, fold and insert multiple sheets per job with the system's Multifeed feature, or process a stack of Business Reply Envelopes, Business Reply Cards or similar short inserts using the Maxifeeder feature. The powerful folding device Eight in One can produce every kind of commonly used fold, up to eight sheets simultaneously. And automatic Optical Mark Recognition (OMR) allows the inserter to "read" coded marks and determine the number and sequence of documents intended for a single addressee.

Most significantly, the FPi 4030 folder-inserter system can handle a high capacity of mail–up to 3,500 letters per hour, offering safe processing through the most user-friendly operation available in office equipment today. Its clever design enables you to make effective use of the full range of features with minimum effort.

The optional special feeder on the FPi 4030s facilitates the processing of special paper thickness and qualities, such as high-gloss paper.

The FPi 4030's optional Maxifeeder allows you to process up to 325 Business Reply Cards, Business Reply Envelopes or similar short inserts.

With automatic Optical Mark Recognition (OMR), the FPi4030 will "read" coded marks and reliably determine the number and sequence of documents intended for a single addressee. Very useful for mailing multi-page invoices.

The ease of operation you rely on

Controlling jobs with the Color Touchscreen makes processing mail seem like magic. The availability of 20 programmable jobs provides quick and easy access to those settings that are frequently used, even allowing you to switch between 14 languages. Informative menus and detailed error messages offer comprehensive diagnostic possibilities.

The convenient design of the FPi 4030 offers an area suitable for sorting and stacking and easy access to all paper stacks. The collator is equipped with automatic paper stops which ensure optimum processing of different paper formats, the smart clamshell design makes it easy to clear the rare paper jam and the handy envelope sealing feature can be enabled or disabled at the touch of a button.

The FPi 4030 is a new generation of folder-inserer systems, providing ideal solutions for every modern, high or mid volume mailroom.

The FPi 4030 needs only three "real" keys. By simply tapping the color touchscreen display, you can navigate through the menus quickly and carry out any adjustments. The Fill & Start feature enables anyone to operate the system without special training. Simply select desired functions and let the machine complete all necessary material measurements and adjustments before starting the job. Settings for specific jobs can be saved in the programmable memory.

The clamshell design allows for an intelligent paper handling path which makes paper jams a rarity, but if one should occur, simply lift the cover and remove snagged material.

The right fold transforms a letter size document into a handy brochure and a perfect mailing. Every kind of commonly-used fold can be selected: Single-fold, zig-zag fold, double-parallel fold or C-fold.

FPi 4030 Folder-Inserter System

FPi 4030

Models Available

FPi-4030	3 Automatic Stations
FPi-4030s	2 Automatic Stations, 1 Special Automatic Station

Document Specifications

Height:	3.5" - 14"
Width:	5" - 9"
Paper weight:	16-67 lbs.
Thickness:	up to 1/3"

Envelope Specifications

Height:	3.5" - 6.4"
Width:	5.5" - 9.8"

Folding Specifications

Folding capacity:	8 sheets (20 lb., single fold)
Maximum paper quality:	45 lbs.
Folding types:	No fold
	Single fold
	Letter fold
	Z-fold
	Double parallel fold

Capacity

Speed:	up to 3,500 envelopes per hour
Inserts per month:	40,000

Dimensions

Length:	47.25"
Width:	16.5"
Height:	26.5"
Weight:	176 lbs.

Power Supply

110 V, 60 Hz or 220/240 V, 50 Hz

FPi 4030 Special Features

- High Capacity
- Safe Processing
- User-friendly Operation
- 20 Programmable Jobs
- Fill & Start
- Real Sheet Control
- Feeder Swap
- Multifeed
- Daily Mail Function
- Eight in One Folding Device
- Color Touch-screen
- 14 Languages
- Fold Only Option
- Automatic Paper Stops
- Insert Control
- Envelope Sealing

Optional Features

- Optical Mark Recognition (OMR)
- Special Feeder
- Maxi Feeder
- System Furniture
- Conveyor-Stacker
- Side Exit - to be used inline with FP Mailing Machine
